GitHub Trending

3 highlights

01 milind-soni/OpenMausBot

OpenMausBot is an open-source Grok Bot alternative that allows you to create your own AI bot team within chat applications. The software comes with virtual machine support that the bots can utilize.

TypeScript · ★ 7,621 · +1,199 today https://github.com/milind-soni/OpenMausBot Report an error

02 CopilotKit/OpenBot

CopilotKit/OpenBot enables the creation of open-source AI coworkers that can access tools such as browsers and files. This system supports any user interface agent (AG-UI agent) integration with a structure that plans every action before executing it and records it afterward.

TypeScript · ★ 8,260 · +247 today https://github.com/CopilotKit/OpenBot Report an error

03 Donchitos/Claude-Code-Game-Studios

Claude-Code-Game-Studios is a project that aims to transform the Claude Code software development tool into a comprehensive game studio. It offers a coordination system that mimics a real studio hierarchy by using 49 AI agents and 72 workflow skills.

02 We're releasing the weights of Mistral Large 4

Mistral AI has released the weights of its large language model, Mistral Large 4, as open source. This move allows developers to run and customize the model on their own infrastructure.

03 Binance-hacker-1029 – $5.6B stolen from Binance

It is alleged that assets worth 5.6 billion dollars were stolen from the Binance cryptocurrency exchange via a digital wallet named Binance-hacker-1029. These data, shared by the blockchain analysis platform Arkham Intelligence, allow for tracking the activity at the wallet address in question.

04 DoorDash to acquire Instacart

Food delivery platform DoorDash has announced that it will acquire the grocery delivery service Instacart. With this merger, it is aimed for stores of all sizes to reach a wider customer base by accessing the technological infrastructure used by large online retailers.

05 LLM Voice

LLM Voice, written by Martin Fowler, addresses the artificiality in texts generated by large language models (LLMs) and the uncanny valley effect this situation creates. The article evaluates the characteristic stylistic issues present in AI-generated content despite its similarity to human language.

1 highlights

01 LiquidAI/LFM3-1.7B

LFM3-1.7B, developed by LiquidAI, is a text-generation model designed for local agents and specialized applications. Based on a new tri-hybrid architecture, this model aims to provide efficient performance with a low parameter count.

5 highlights

01 Intrinsic Distribution Matching

Intrinsic Distribution Matching, shared by Hugging Face, aims to achieve high accuracy with a limited number of steps in text-to-image generation processes. Based on the distribution matching distillation method, this study examines the effects of an explicit moment constraint for the convergence of generated images to the reference distribution.

02 Your Benchmark Is an Empirical Measure Over Difficulty

The article shared by Hugging Face defines benchmark tests not just as collections of questions, but as empirical measurement tools based on difficulty levels. This perspective aims to make evaluation processes more systematic by identifying fundamental failure modes such as measurement misalignment and coverage gaps.

03 A Broader Look into MLLM's Retrieval Heads

The article shared by Hugging Face examines the retrieval heads that provide multimodal large language models with the ability to find evidence in long inputs. The study questions the effect of this mechanism across different modes and how it can be used to improve models.

04 Co-Design Bench: Multimodal Collaborative Coding Evaluation for Agentic Models

Co-Design Bench, shared by Hugging Face, is an evaluation tool that measures the ability of AI coding agents to translate real users' multimodal requests into application changes. Containing 273 tasks across two distinct areas—multimodal editing and repository editing—this benchmark was created using data obtained from real user sessions.

05 AskStream: When and What to Ask Proactively under Uncertainty in Streaming Video Understanding

AskStream offers an interactive method that determines when and what an AI should ask in cases of uncertainty during streaming videos. It aims to transform multimodal large language models from passive responders into agents that proactively query for missing information.

📖 Glossary of Industry Terms

9 terms

IDE

A comprehensive work environment that enables software developers to write, edit, and debug code.

---

open source

Software whose source code is open for anyone to access, examine, and improve.

AG-UI agent

AI software capable of performing operations via a user interface, reading the screen, and executing actions such as clicking or typing.

---

workflow skills

Specific task definitions and capabilities required to complete a particular business process step-by-step.

---

weights

Numerical values that store the information learned by an artificial intelligence model during training and determine the model's decision-making process.

LLM

Artificial intelligence models trained on vast amounts of data that can understand human language and generate text.

---

uncanny valley

The feeling of unease that arises when content generated by artificial intelligence looks very similar to human work but does not appear completely natural.

---

text-generation

The process of creating meaningful sentences and texts based on given prompts.

---

distillation

The process of transferring the knowledge of a large and complex artificial intelligence model to a smaller, faster-running model.

---
