📖 Glossary of Industry Terms

5 terms

open source

It is a type of software whose source code is open for everyone to access and improve.

---

local-first

It is an approach that prioritizes storing and processing data directly on the user's own device without the need for the internet.

---

multi-agent orchestration

It is a management process that enables multiple artificial intelligence agents to work in harmony towards a common goal.

---

use-after-free

It is a security vulnerability that occurs when a program attempts to use a memory area after it has been freed.

---

sandbox

It is a restricted area that allows software to be run in a safe and isolated environment without harming the main system.
