5 highlights

01 ZhuLinsen/daily_stock_analysis back in the spotlight

ZhuLinsen/daily_stock_analysis is a system that performs stock analysis across multiple markets using large language models (LLMs). The software processes data from various sources and real-time news to provide a decision support dashboard and send automated notifications.

Python · ★ 69,997 · +429 today https://github.com/ZhuLinsen/daily_stock_analysis Report an error

02 GoogleChrome/modern-web-guidance-src

GoogleChrome/modern-web-guidance-src is a resource repository containing the code and documentation necessary for creating, calibrating, and evaluating modern web development guides. Developed in TypeScript, this project enables the management of guidance content for web standards.

TypeScript · ★ 1,570 · +133 today https://github.com/GoogleChrome/modern-web-guidance-src Report an error

03 shadcn/improve

shadcn/improve is an agent capability that examines a codebase and creates work plans that can be implemented by lower-cost AI models. Aiming to optimize developers' code review and implementation planning processes, this tool targets planning complex tasks with capable models and executing them with more economical ones.

★ 10,615 · +333 today https://github.com/shadcn/improve Report an error

04 openai/codex-security back in the spotlight

Developed by OpenAI, codex-security offers a command-line interface (CLI) and a software development kit (SDK) designed to find, verify, and remediate security vulnerabilities. Written in TypeScript, this tool aims to automate the process of detecting security weaknesses in software projects.

TypeScript · ★ 11,537 · +20 today https://github.com/openai/codex-security Report an error

05 TheAlgorithms/Java

TheAlgorithms/Java offers an open-source collection of various algorithms written in the Java programming language. Users can run, edit, or contribute to these algorithms directly via the cloud-based development environment Gitpod.io.

01 Google SWE points 48 AI agents at NASA Lidar, finds unmapped Maya pyramid in 72h

A software engineer working at Google used 48 AI agents to analyze NASA's lidar (laser scanning) data. This system detected an unmapped Mayan pyramid beneath the forest canopy in less than 72 hours.

02 Scion is back and is going to sell a kei truck in America

Toyota's automotive brand Scion has announced its return, stating that it will sell small-sized commercial vehicles such as kei trucks, bicycles, and side-by-side hybrid off-road vehicles in the American market. In its new era, the brand aims to operate with an unconventional product range.

03 Apple has new Mac app coming to make running local AI models easy

Apple is working on a new Mac application that makes it easier to run local artificial intelligence models. According to leaked information, the company aims to simplify the process for users to run models on their own devices.

04 Protecting SSH Keys with macOS Secure Enclave

macOS Secure Enclave provides a security layer that protects SSH keys at the hardware level, requiring Touch ID authentication for every use. This method allows SSH keys to be stored using the system's own security architecture without the need for third-party applications.

01 MiniMaxAI/MiniMax-H3-Image

Developed by MiniMaxAI, MiniMax-H3-Image is an artificial intelligence model with text-to-image conversion capabilities. The software is offered with application programming interfaces (APIs) that support image editing and prompt expansion functions.

01 PhyRubric: Rubric-Grounded Diagnostic Evaluation of Physical Commonsense in Text-to-Video Generation

PhyRubric is a rubric-based diagnostic framework developed to evaluate the physical common sense compliance of text-to-video generation models. This system aims to provide a concrete analysis based on physical principles instead of the subjective scoring found in existing benchmarking methods.

02 DyCraft: An Agentic System for Long-Horizon 4D Scene Generation

DyCraft is an agent-based system designed to create long-term and consistent 4D scene animations. Unlike traditional methods, it aims to produce more realistic and naturally moving objects by detecting and correcting physical errors.

03 From Tool State to Scientific Action: Auditing Decision Provenance in Biomedical Research Agents

An article published on Hugging Face introduces a testing method called BioAgent-DF, which examines the evidence consistency in the decision-making processes of artificial intelligence agents used in biomedical research. The study shows that Qwen3.5-4B and Gemma 3 4B IT models can produce different citation and reading results on the same scientific data.

05 The Surprising Effectiveness of Deleting Weights in LLM Post-Training

The article shared by Hugging Face shows that new capabilities can be acquired by zeroing out less than 0.05% of the weights of large language models (LLMs). This method, called Deletion Tuning, allows achieving results similar to full fine-tuning by masking specific parameters instead of training the entire model.

📖 Glossary of Industry Terms

9 terms

LLM

Artificial intelligence models trained on massive amounts of data that can understand human language and generate text.

CLI

A text-based interface that runs programs using written commands instead of a mouse.

SDK

A set of tools and libraries that facilitate the development of applications by software developers for a specific platform or system.

---

lazer tarama

A measurement technology that creates a three-dimensional map of an object or area using laser beams.

---

kei truck

Very small and economical commercial trucks produced according to Japanese standards.

---

side-by-side

Small motorized vehicles with side-by-side seating, generally designed for off-road use.

---

text-to-image

Technology capable of creating visual content based on written descriptions.

---

prompt expansion

A method of making the user's short commands more detailed and descriptive to ensure the artificial intelligence provides better results.

API

An interface that allows different software to exchange data and communicate with each other.
